SUMMARY

Full-stack developer (React, Node.js, Express, PostgreSQL, MongoDB) who built and deployed NeoBank, a PERN-stack digital banking app with KYC workflow, role-based access, money transfers and AI-generated financial insights. B.Com graduate (CGPA 8.43) with MCA examination completed, result awaited. Seeking an entry-level Software Engineer role.

PROJECTS

NeoBank – Digital Banking Web Application

Jun 2026 – Aug 2026

React, Tailwind CSS, Node.js, Express.js, Prisma ORM, PostgreSQL, JWT, Groq API | Live demo | Source code

- Built a full-stack banking app (MCA capstone) with separate customer and admin experiences: registration, KYC document submission (Cloudinary), Savings/Current accounts, beneficiaries, deposits, withdrawals, fund transfers and transaction history.
- Enforced banking business rules in the backend (KYC approval before account creation, per-transaction limits, balance and beneficiary-limit checks) and used database transactions to keep financial operations consistent.
- Secured the app with JWT authentication, bcrypt password hashing, protected routes, role-based authorization and server-side validation; built an admin dashboard to approve/reject KYC and search customers and transactions.
- Integrated the Groq LLM to generate personalised insights from a user's transactions, including spending summaries, income vs expenditure, trends and savings suggestions.

themeDex – AI-Powered Theme Installation Guide

Jun 2026 – Present

React, Express.js, FastAPI (Python), Groq API | Source code

- Building an AI guide generator for Linux customization projects (dotfiles, shell and cursor themes): users paste a public GitHub repo URL and get a beginner-friendly, step-by-step installation guide rendered as Markdown in a React UI.
- Developed a Python (FastAPI) repo-analyzer microservice using the GitHub API that fetches the README, detects referenced install scripts and retrieves their contents, so the LLM works from real repository data instead of guessing.
- Built the Express.js backend that orchestrates the analyzer and the Groq LLM, with structured prompts, centralized error handling.

University Website

Jan 2026

HTML, CSS, JavaScript, GitHub Pages

- Designed and deployed a responsive university website with dynamic content and intuitive navigation on GitHub Pages.

TECHNICAL SKILLS

Languages	JavaScript (ES6+), Python, Java, HTML5, CSS3
Frontend	React.js, React Router, Tailwind CSS, DaisyUI
Backend	Node.js, Express.js, FastAPI, Prisma ORM, REST APIs, JWT authentication, role-based access
Databases	PostgreSQL, MongoDB, MySQL
AI / Cloud	Groq LLM API, Cloudinary, Vercel
Tools	Git, GitHub, Postman, VS Code

EDUCATION

Master of Computer Applications (MCA, Online) – Jain University, Bangalore 2024 – 2026

Specialization: Full Stack Development (coursework incl. Docker, Kubernetes and DevOps fundamentals) | Final examination completed, result awaited

Bachelor of Commerce (B.Com) – N.G. Bedekar College of Commerce, Thane Jul 2021 – Apr 2024

CGPA: 8.43

LANGUAGES

English, Hindi, Marathi
